

**Biker**

4light Biker harness is specially designed for riders of motorcycles, scooters and quad bikes with the need to be seen and increase safety. The harness raises the light source and makes the rider more visible from different angles. A transmitter connects wirelessly to the vehicle's electronics and enables the harness to synchronize with blinkers, brake lights and warning lights.

**Trooper**

4light Trooper is a harness designed for "blue light" users such as police, ambulance and other emergency personal. The harness illuminates the area in front of the users while making them more visible in their environment. Trooper is sold only to authorities.

**Harness with lighting for increased safety**

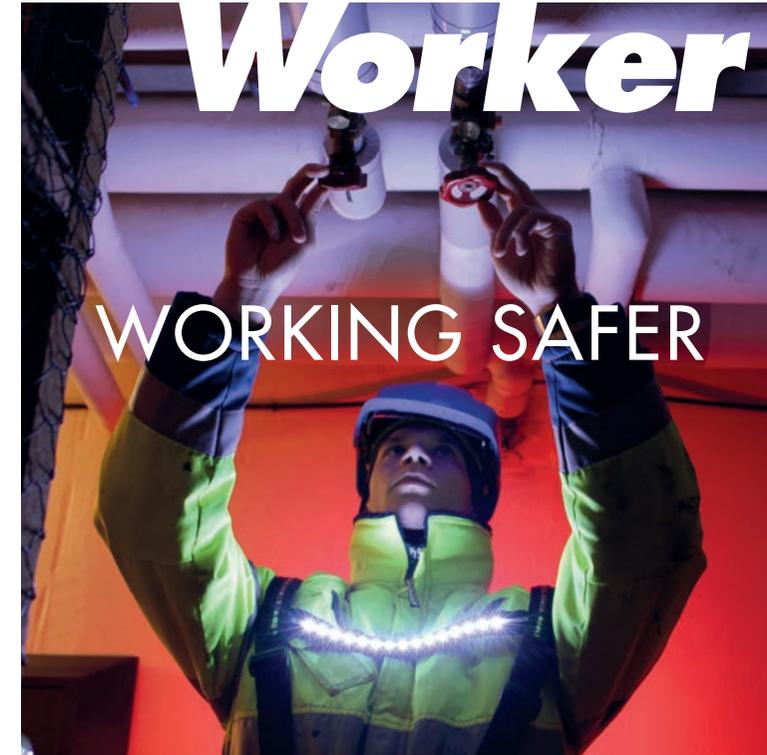

4light harness with LED lighting is a Swedish invention developed in Sweden. It is available in several models and sizes for different professions and users; Worker, Biker and Trooper.

The idea is both ingenious and simple. LED lighting allows the user to be seen from different angles for increased safety and illuminates the area in front of the user for working hands free.

4light Worker - harness with LED lighting for workers who need to be visible and working hands free

### Worker

4light Worker is a harness with lighting designed for people working in areas where being seen is important for their safety. Better visibility increases safety and affects the working conditions in a positive way by preventing accidents in hazardous workplaces.

The harness illuminates the area in front of the user for working hands free. The assurance of safety and visibility combined with good lighting makes it easy to focus on the task.

### Durable harness

The harness is made of durable plastic with propylene window of plastic that lets light through. It has adjustable waist and shoulder straps for easy adjustments to the user. The harness is equipped with snap buttons for easy opening to avoid getting caught.

### LED lighting

The harness is easy to use and can be activated a full work shift without recharging. The LED light on Worker is controlled by two touch control buttons at the left side of the belt. Worker has yellow LED lights on the sides, white LED lights on the front that illuminates forward and red LED lights on the user's back. Charging time is approximately 180 minutes to be fully charged and the battery can be recharged up to 1000 times. Battery charger is included. Operating temperature from -15 to +75 °C.

4light Worker can be specially ordered and customized for different needs.
